

Figure 1. A schematic diagram illustrating the experimental design. The figure shows a sequence of events from left to right. It begins with a box labeled "Stimulus presentation". This leads to a box labeled "Response selection", which contains two options: "No response" and "Response". From "Response selection", there are two paths. One path goes down to a box labeled "No response", which then leads to a box labeled "No reward". The other path goes up to a box labeled "Response", which then leads to a box labeled "Reward". Both "No reward" and "Reward" boxes lead to a final box labeled "Outcome evaluation".
